SUMMARY

Cybersecurity and ML engineer with **5+ years of MSP and enterprise IT experience** supporting Southern California client environments across Microsoft 365, endpoint support, identity and access, Windows/macOS/Linux administration, network troubleshooting, cloud-connected infrastructure, and private research systems. Backed by Security+, Network+, AWS, Palo Alto, and IBM cybersecurity credentials plus hands-on lab work in Splunk, Active Directory, pfSense, VMware, packet analysis, and GPU-assisted systematic trading infrastructure.

EXPERIENCE

MSP Support Engineer | 724IT | San Diego, CA | Jul 2026–Present

- Provide first-line MSP support for small and mid-sized business clients, handling tickets, phone support, remote troubleshooting, and occasional onsite visits across Windows 10/11, Microsoft 365, printers, Wi-Fi, VPN, and day-to-day connectivity issues.
- Set up and support client accounts and equipment including Microsoft 365, ConnectWise PSA, RMM tooling, MFA, endpoint onboarding, offboarding, and general user provisioning with accurate ticket documentation and escalation notes.
- Train on core managed-service platforms including ConnectWise PSA and ticketing, backup and disaster recovery workflows, VoIP systems, and the broader security stack while working directly with clients and senior engineers in a production support environment.

Slot Systems Technician | Jamul Casino | San Diego, CA | 2025–2026

- Configure, maintain, and troubleshoot slot systems across hardware diagnostics, device communication, IP addressing, and network connectivity in a high-availability casino environment.
- Restore uptime by isolating faults across hardware and network layers and coordinating practical fixes quickly during operational incidents.

Computer Engineer 2 | Viejas Casino | San Diego, CA | 2022–2024

- Supported 1,500+ enterprise devices across Windows, macOS, Linux, iOS, and Android environments spanning endpoints, servers, printers, network hardware, and proprietary systems.
- Delivered cross-platform troubleshooting and end-user support across infrastructure, operational technology, and cloud-connected tools used in daily casino operations.

PC/LAN Technician | Sycuan Casino | San Diego, CA | 2021–2022

- Supported 1,000+ devices and resolved enterprise outages during overnight operations where independent troubleshooting and continuity were critical.
- Administered Active Directory users, permissions, and access-related requests while balancing user support with infrastructure troubleshooting.

PROJECTS

SIEM Home Lab | Splunk • Windows Server Active Directory • VMware • pfSense

- Built a VMware-based security lab with Windows Server Active Directory, pfSense, and Splunk Free to centralize host, identity, and network telemetry.
- Collected Windows Event Logs, Sysmon telemetry, and AD audit data; simulated brute force, account lockout, and privilege escalation scenarios; and wrote Splunk searches to detect each event.

Network Traffic Analysis | Wireshark • tcpdump • Kali Linux

- Captured and analyzed HTTP, FTP, DNS, ARP, and TCP traffic to identify cleartext credentials, ARP spoofing behavior, and other indicators useful for detection and incident investigation.

CERTIFICATIONS

CompTIA Security+ • CompTIA Network+ • AWS Solutions Architect Associate • AWS Cloud Practitioner • IBM Cybersecurity Analyst • Palo Alto Networks Associate

TECHNICAL SKILLS

Security: Endpoint security, SIEM, vulnerability remediation, incident response, digital forensics, identity and access support

Systems: Windows, macOS, Linux, iOS, Android, Active Directory, remote support, hardware diagnostics

Networking: TCP/IP, subnetting, VLANs, network configuration, pfSense, Palo Alto concepts, troubleshooting

Cloud & Tools: AWS EC2, S3, VPC, Splunk, Sysmon, Wireshark, tcpdump, VMware

EDUCATION

B.S. IT Business Management — Western Governors University (In Progress)

Network Security Program — City College of San Francisco (Completed)
